***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 6-17 and 19-25, 27-28 and 30-31 are rejected under 35

U.S.C. 102(e) as being anticipated by Wetterlin.

Wetterlin discloses in figures 1-3 an inhaler comprising a housing 6, defining an airway 5, a (meter or discrete, col. 3, line 2), dose of medicament (inside container 20), a dose protector 12, covering means 16, that is biased into contact with the container 20, and opens in response to one condition (air coming through 5) in a first direction (upward), but not in a second direction, the covering means opens in response to air, the covering means responds by covering the dose when air flows in a second direction (which could be caused by a user exhaling into the inhaler), the covering means is a sealing flap (a membrane, made of plastic), the dose is metered by volume of the medicament or by the volume into the container 20 (col. 3, lines 4-8), the container is a pocket (the word pocket is being interpreted as an area used to store something), the container has a rim (around the opening 11), the sealing flap is spaced from the pocket (fig. 1), a closure means 30, the distance between the inside walls increase (at the lower end) as the distance from the pocket increase (moving downward from the top of

the device), a fixed seal 8, the inhaler is a dry powered inhaler (col. 1, lines 20-21) and a method of administering a dose of medicament.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wetterlin in view of Leedom.

Wetterlin discloses in figures 1-3 a dose protector, substantially as claimed. However, Wetterlin doesn't disclose the sealing flap being a thermosetting rubber. Leedom teaches in figure a dose protector comprising a sealing flap made of a shape memory material. It would have been obvious to one having ordinary skill in the art at the time that the invention was made that the sealing flap made of plastic disclosed by Wetterlin could be fabricated of a thermosetting rubber because it is a shape memory material that would close the air off and prevent the flow when the user desires.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. No additional prior art was cited in this office action.
